

Aquiller™ is a Revolution, not an Evolution

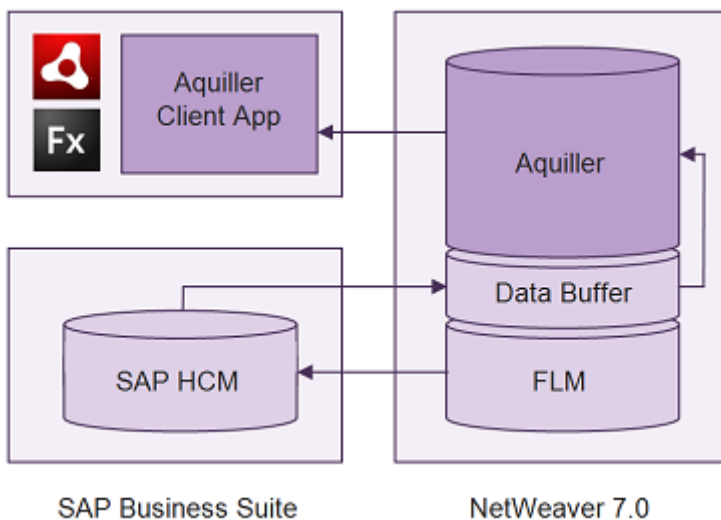

Quick and efficient correspondence document generation, fully integrated with SAP

Aquiller Overview

Aquiller™ is an out-of-the-box document and contract generation system that is completely integrated with SAP. Based on award-winning technology from Arch, it offers a simple, intelligent and cost effective solution for improving the efficiency of HR operations.

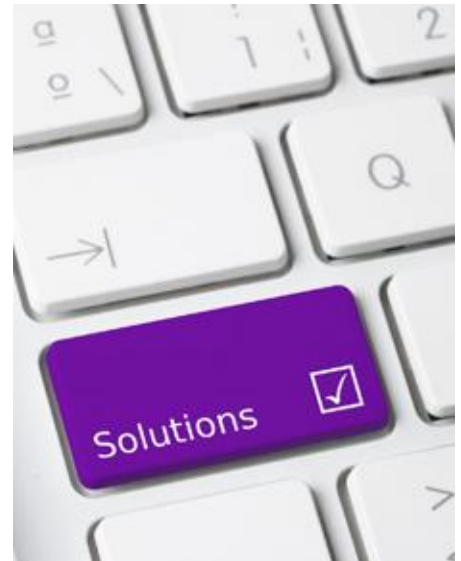

Aquiller™ is delivered as an SAP Add-On that is installed on the WebAS ABAP, together with a client-side Adobe Air application. The FLM Add-On is also required as part of the Aquiller installation.

Figure 1: Aquiller Architecture

From an administrative and installation perspective, Aquiller™ installs quickly using standard SAP tools and ships with standard connectors to SAP's HCM system, minimizing any customization requirements.

Typical installation and technical training activities are completed within a few days, so organizations can be up and running with Aquiller™ quickly and cost-effectively.

Aquiller is an out-of-the-box document and correspondence generation system that is completely integrated with SAP.

It can radically improve the efficiency of employee correspondence, offering savings in headcount and allowing skilled HR staff to focus on more value-added tasks.

Server Requirements

Aquiller runs on any SAP NetWeaver 700 system. The minimum Support Pack is SP15 and the software is built at Service Pack 24 (NW2004s). It is recommended that both ABAP and Java stacks be at the same Support Pack and are patched to the latest available before the installation process is started. The target system can be Unicode or Non-Unicode.

In order for Aquiller to render PDFs the ADS component must be configured. This component is delivered as part of the standard NW7.0 Java Stack. Note that for non-interactive forms the ADS Credential is not required.

Client Requirements

Content authors require Adobe Reader and Adobe Air to be installed. If Adobe Air is not installed, it will automatically be installed as part of the Aquiller installation. End users, i.e those viewing the final correspondence, simply require a web browser and Adobe Reader.

The lowest version of Adobe Reader supported by Aquiller is 8.1.1 and further details about the system requirements for Adobe Air can be found on the Adobe website.

Enhanced Security

Aquiller™ supports the use of “Adobe LiveCycle Digital Signatures” to certify documents to the highest standards of digital security. Aquiller™ can also be used in conjunction with “Adobe LiveCycle Digital Rights Management”, to control perishable documents such as price lists or legal papers that may need to be recalled or destroyed at short notice. The inclusion of such additional capabilities truly brings the best of Adobe and SAP technology to the world of correspondence generation.
